

Introduction to Quantum Software and TKET

Callum Macpherson

QUANTINUUM

Why do Quantum Computing?

- ❖ Shor's Algorithm - near exponential advantage for factoring
- ❖ Grover's Algorithm - Unstructured search
- ❖ Quantum Chemistry/Materials - Simulating quantum systems
- ❖ Others - Machine learning, industrial optimisation, differential equations...

Note: Many of the most interesting applications of quantum computing require quantum error correction. Error correction codes typically require many additional physical qubits to implement logical operations.

Quantum Software?

System software

- ❖ **Compiler - TKET, qiskit**
- ❖ Online services - AWS Braket, Azure quantum
- ❖ Quantum Error Correction/Mitigation - Qermit, others
- ❖ Quantum Programming languages - Q#, Silq, quipper

Applications Software

- ❖ Quantum chemistry/materials science - InQuanto
- ❖ Machine learning - PennyLane, others
- ❖ Industrial optimisation

Quantum Hardware?

- ❖ Trapped ions - **Quantinuum**, IONQ, AQT
- ❖ Superconductors - IBM, Google, Rigetti, IQM
- ❖ Photonics - PsiQuantum, Quandela...
- ❖ Neutral atoms - Pasqal, Infleqtion...
- ❖ Others - Semiconductors, topological qubits...

H-series Ion traps

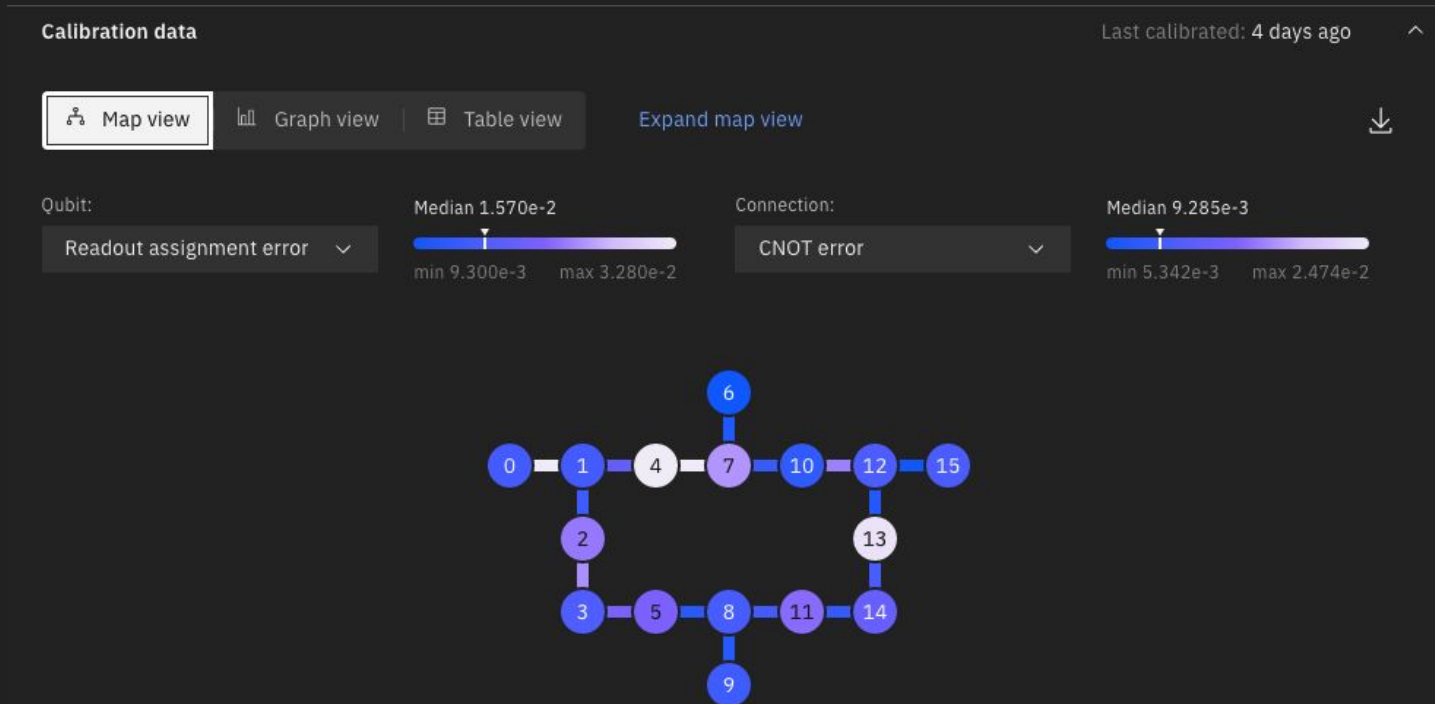

Superconducting circuits - IBM

Some Challenges with Quantum computing

- ❖ Not enough qubits for many of the exciting applications
- ❖ The qubits we do have are subject to noise
- ❖ Complicated error channels which are hard to model
- ❖ Quantum error correction at an early stage
- ❖ **Low-level details greatly influence performance** - gate count, connectivity

A Real Quantum device

Source: IBM Quantum

Quantum compilation

Example: Quantum Fourier Transform Circuit

Complete connectivity graph

Target device: IBMQ Belem

- ❖ Nearest neighbour interaction only
- ❖ Limited gateset $\{X, SX, R_z, CX\}$
- ❖ CNOT error

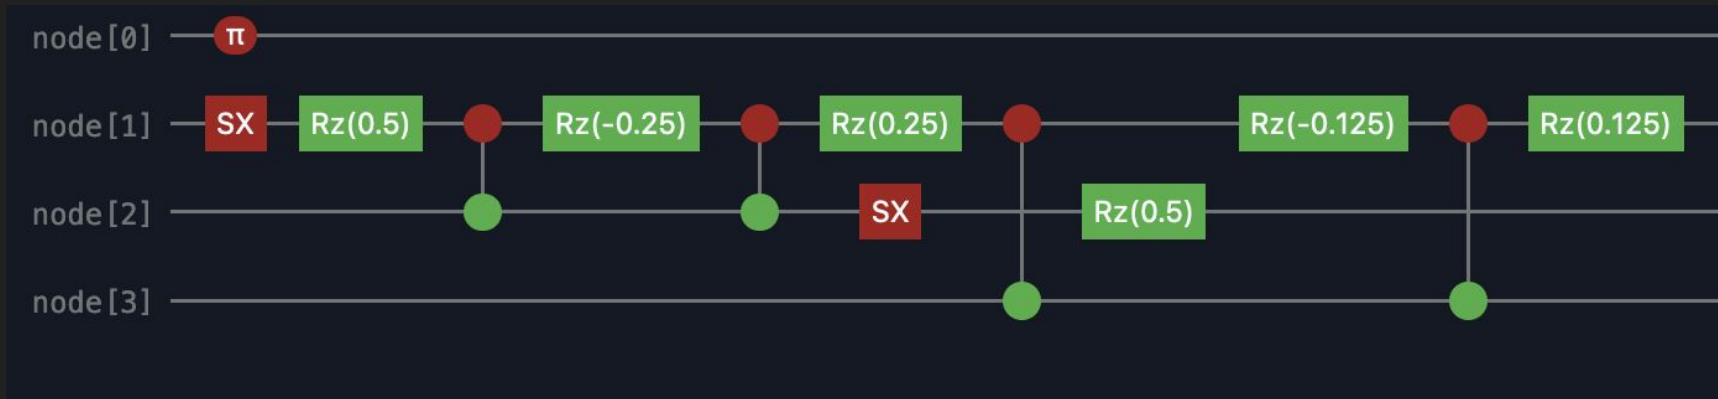

Belem qubit topology

Quantum compilation II

Compiled QFT Circuit (incomplete) - meets device constraints

What is TKET?

A quantum software library developed by Quantinuum

- ❖ A high performance quantum compiler
- ❖ Open source! <https://github.com/CQCL/tket>
- ❖ “Hardware agnostic” - Targets a range of devices and simulators
- ❖ Compatible with popular libraries - Qiskit, Cirq, Braket, pennylane + more

```
pip install pytket
```

Note: Cloud access through Azure and AWS Braket is also available

Front ends

High level interface

Qiskit

Cirq

PENNYLANE

Build Circuits

pytket
python

TKET

C++ library

Rewrite Circuits

Solve for device constraints
Perform optimisations

Backends

Quantum devices/simulators
